Key content/other useful information

Important skills:

- reason logically and recognise incorrect reasoning
- appreciate the power of generalisation and mathematical proof
- see algebra as a natural tool for communicating mathematically and for solving a range of problems
- appreciate how situations can be represented by mathematical models and to consider the assumptions made and limitations of mathematical models
- see mathematics as a coherent subject and understand how different areas of the subject link together
- appreciate the elegance and beauty of mathematics for its own sake as well as beginning to realise its fundamental importance in understanding and shaping our world
