

Year 9 ICT

Task one: In the table below write what people would have done for each of the tasks before the invention of the internet.

Task two: Draw below what you think computers will look like in 10 years' time.

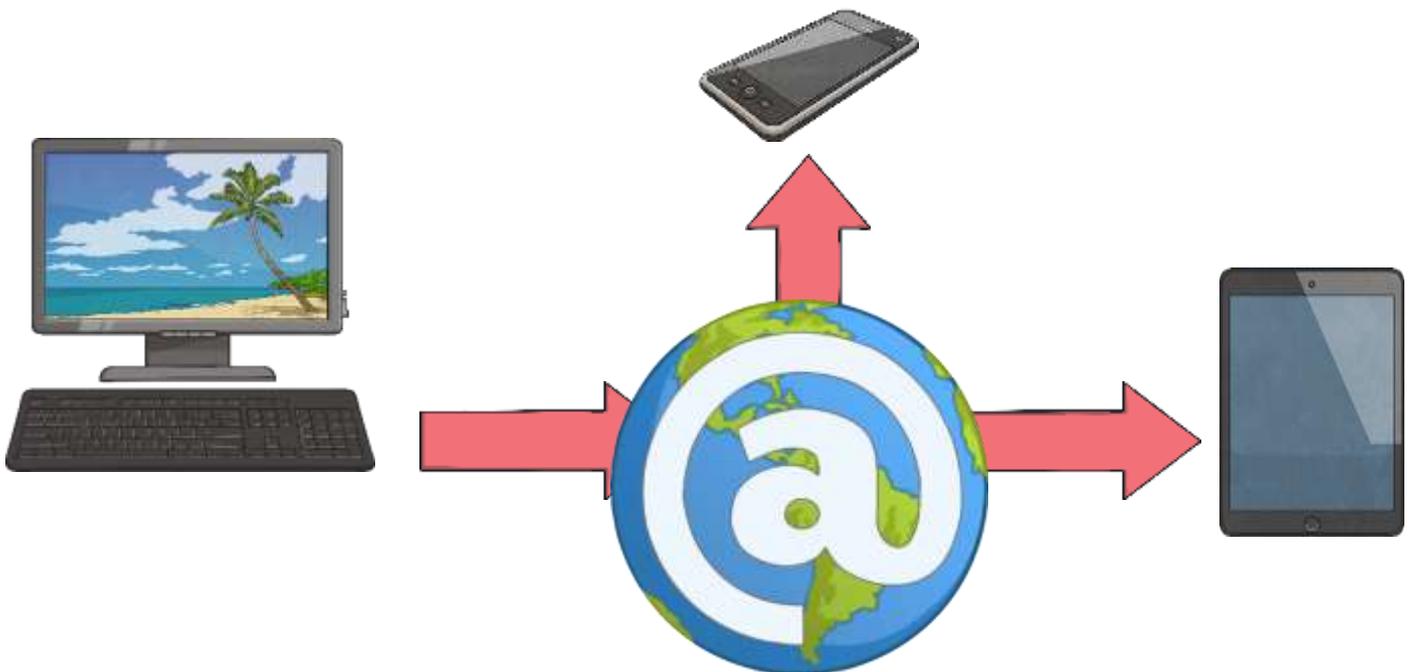

Task three: Can you describe the computer parts and devices based on the pictures and your own knowledge.

How the internet was created

The internet is a term used when computers, mobile phones and tablets are all joined together in a network.

It might surprise you to know that the internet has been around since the 1960s, when the first computers were joined together.

Today the internet has grown into a huge spider's web where millions of computers, networks, phones and tablets are all joined together.

Task one: In the table below write what people would have done for each of the tasks before the invention of the internet.

Before the internet was invented	The internet today
	We use the internet to keep in touch with other people around the world using email
	We are able to send and share files with other easily.
	We use it to access the information .
	It keeps all of our computers and devices connected together

Evolution of computers

Computers have not always looked the way they do.

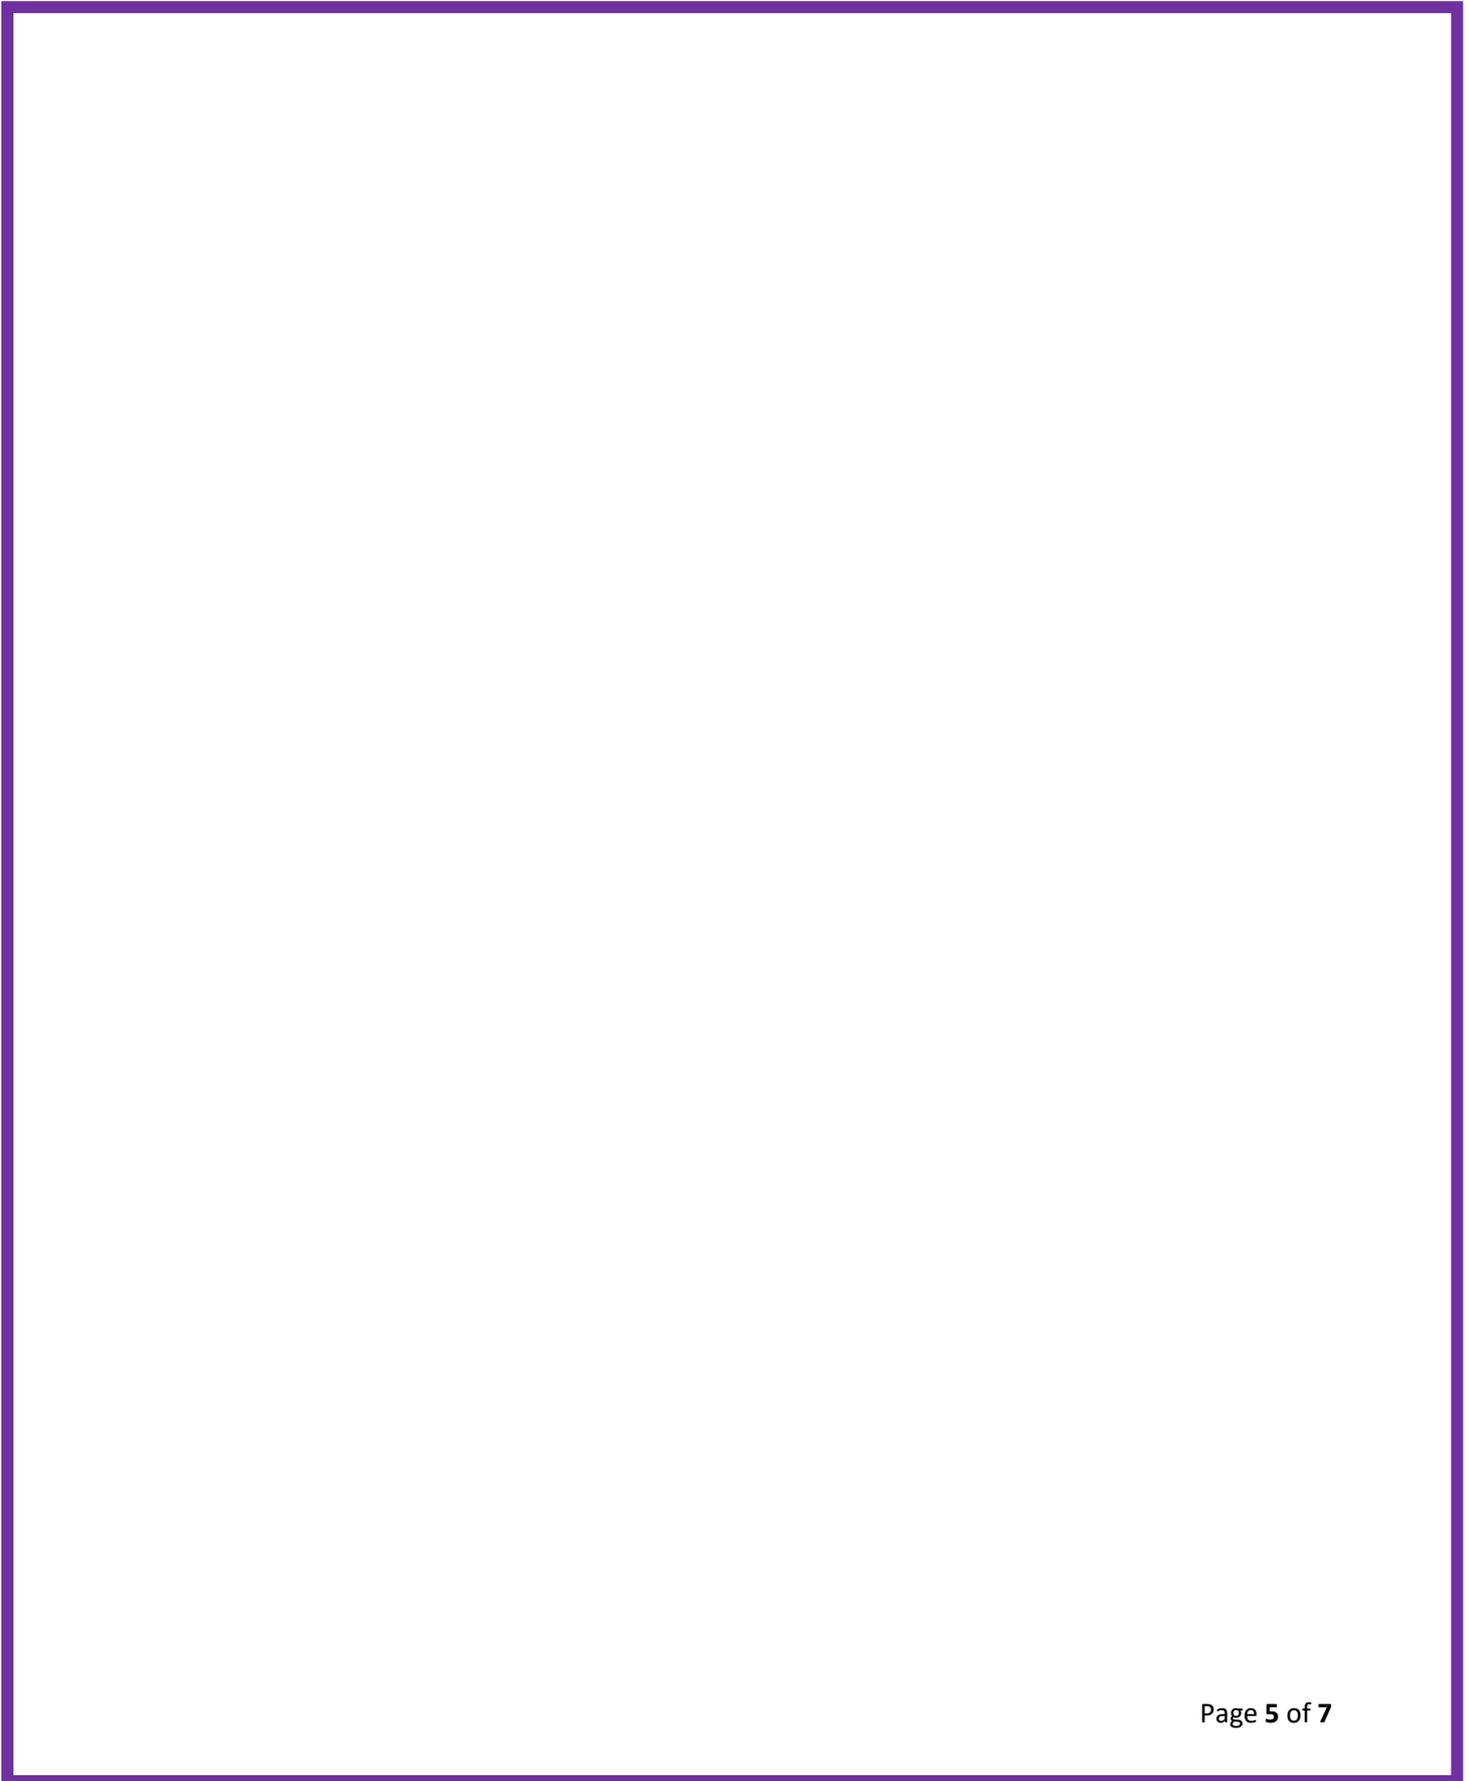

In fact, they used to be huge and chunky!

Every year scientists work to make computers work faster, hold more storage and look better.

Task two: Draw below what you think computers will look like in 10 years' time.

Computer parts and devices

A computer has many parts and many different devices which can be attached on.

Some of these parts and devices we can't use a computer without. Other parts and devices are to improve our experience whilst on the computer.

Task three: Can you describe the computer parts and devices based on the pictures and your own knowledge.

Name of part/device	Image of part/device	Description of part/device
Keyboard		
Mouse		
Monitor		
Printer		
Speaker
