Intent

Geography at Queniborough Primary School prepares young people with the knowledge, skills and understanding to make sense of their world and to face the challenges that will shape our societies and environments at the local, national and global scales.

*From the moment we are born, it is our instinct to begin to explore our world around us with all our senses.*

At Queniborough we feel it is important to nurture and encourage this natural curiosity, to shape and direct it, to turn the children into inquisitive, questioning learners who look closely at the world around them and begin to be able to interpret what they see. We aim to instil a sense of environmental responsibility and encourage children to understand environmental issues at a local and global level. We ensure our children have an understanding of their physical and human geography starting with their school in Queniborough before finding out about Leicestershire, the UK, Europe and the world, so all children can take an active part in contributing to and protecting this world as they grow up.

Curriculum

- Children get quality lessons taught within a topic. Children are typically taught four topics of work yearly, each comprising six hours of teaching. These topics equip children with local and global knowledge of key physical and human processes.

Fieldwork

- Children are skilled in completing a range of fieldwork, exploring both human and physical features of the local area.

Cultural Capital

- Children are taught about local, national and global geographical events as they occur and learn to question how we see the world and how we can change the world for the better.
